I am an architect and urban development professional with a passion for creating sustainable urban solutions. I graduated from the Faculty of Architecture, Lucknow, in 2017 and pursued a master's degree in Urban Development and Management (MTech-UDM) from TERI School of Advanced Studies, New Delhi, in 2021.

My professional journey has been diverse, spanning architectural practice and research in urban systems. With two years of architectural experience, I honed my design and project management skills before transitioning to focus on the critical domain of Water, Sanitation, and Hygiene (WaSH). My roles at IQVIA, New Delhi, and Praja Foundation, Mumbai, allowed me to combine operational expertise with research to address pressing urban challenges.

As an urban practitioner, I embrace a multidisciplinary approach to problem-solving. My work revolves around integrating sustainable practices into urban development, ensuring that solutions are not only innovative but also practical and impactful. I'm deeply committed to addressing the complexities of urban systems and contributing meaningfully to the creation of resilient, inclusive cities.
