Course title: Plant and Animal Biotechnology							
Course code: BBP 121	No. of credits: 2	L-T-P: 28 -0-0	Learning hours: 28				
Pre-requisite course code and title (if any): Science graduate							
Department: Department of Biotechnology							
Course coordinator: Dr. Shashi Bhushan Tripathi		Course instructor:					
Contact details:							
Course type: Core		Course offered in: Semester 1					

Course description:

The broad objective of the present core course is to provide an overview of plant and animal biotechnology. In this respect, students will be acquainted with principles and applications of different techniques of plant and animal cell/tissue culture and genetic transformation. In case of cell and tissue culture, the focus shall be on media composition and preparation, methods of *in vitro* regeneration, their applications and limitations. With respect to genetic transformation, the focus will be on detection and characterization of transformants. Further, the global status of GMOs, various case studies illustrating the application of biotechnology in developing crop varieties resistant to various biotic and abiotic stresses, enhancing nutritional quality and knock-out animal technology would be dealt in detail.

Course objectives:

- 1. To introduce the students to the principles and applications of plant tissue culture and animal cell culture
- 2. Development of plant transformation vectors specifically designed to facilitate transfer of improved/unique genetic traits to plants, and to provide knowledge on diverse genetic transformation technologies available for the production of transgenic plants in crop improvement programs.
- 3. Familiarization with knock-out and transgenic animals to model disease and study gene function.

Course	contents
Course	COHICHIUS

Module	Topic	L	T	P
1	Principles of Plant Tissue Culture		0	0
	History of plant tissue culture			
	Set up of a plant tissue culture laboratory			
	Media constituents and preparation			
	Micropropagation and clonal fidelity testing			
	Meristem culture for production of virus free plants			
	Somatic Embryogenesis			
	Organogenesis			
	Micrografting			
	Hardening and acclimatization			
2	Applications of plant tissue culture		0	0
	Anther, pollen and ovary culture for production of doubled haploids			
	Production of Triploids			
	Embryo culture and embryo rescue			
	Protoplast isolation, culture and fusion			

		1		
	Cell culture and production of secondary metabolites			
	• Cryopreservation			
	Synthetic seed technology			
3	Animal cell culture and biotechnology	8	0	0
	• Brief history of animal cell culture; cell culture media and reagents (buffer and pH; blood buffering system)			
	Basic techniques of mammalian cell culture			
	Organotypic and histotypic cultures			
	• Primary culture, secondary culture, continuous cell lines (cancer cell line), suspension cultures			
	 Cell synchronization and transformation 			
	 Clonal selection, cell fusion and monoclonal antibody production 			
	 Application of animal cell culture for virus isolation and production of human and animal viral vaccines 			
	 Application of animal cell culture for disease modelling and high throughput drug screening 			
	 Application of animal cell culture for isolation of pharmaceutical proteins and recombinant anti-bodies 			
	 Development of iPSC and human specific disease modelling 			
	Multiple Ovulation and Embryo Transfer Technology			
4	Applications of transgenic technology	7	0	0
	Introduction to Agrobacterium tumefaciens and Ti Plasmids			
	In-planta transformation methods			
	Chloroplast Transformation			
	 Detection, characterization and expression of transformants (Genetic markers, reporter genes and transgene stability) 			
	• Conferring resistance to biotic stresses (pests, viruses, fungi) and abiotic stresses (salt, drought, heat)			
	Enhancing nutritional quality of crops			
	• Transgenics for male sterility			
	Marker free transgenics			
	Knock-out/in animal development using embryonic stem cells technology			
	Transgenic animal development to model disease and study gene function.			
	Total	28	0	0
		_	1	-

Evaluation criteria:

- 1. Test 1- (Module 1) 30%
- 2. Test 2- (Module 2) 30%
- 3. Test 3- (Modules 3 and 4) 40%

Learning outcomes:

- 1. An understanding of principles of various plant and animal cell/tissue culture techniques (Test 1-3)
- 2. An understanding of commercial applications of various cell and tissue culture-based technologies

- in plants and animals (Test 1-2)
- 3. Ability to rationalize and develop strategies for incorporating novel traits in plants and animals through genetic engineering (Test 3)

Pedagogical Approach:

- 1. Online/classroom lectures and discussions
- 2. Case studies and examples from original research articles

Skill Set:

- 1. Formulation of media preparation for plant and animal cell cultures
- 2. Initiation and maintenance of plant and animal cell cultures
- 3. Genetic transformation of plants

Employabilty:

- 1. Academic organisations
- 2. Tissue culture facilities and horticulture companies
- 3. Agri-biotechnology and seed companies
- 4. Pharmaceutical and drug research companies
- 5. IPR consultancy firms

Materials:

Suggested Readings

Additional information (if any):

Student responsibilities:

- 1. Class attendance.
- 2. Study of reading materials as specified by course instructor
- 3. Self-study

Course reviewers:

- 1. Prof. Ranjit Kumar Giri, National Brain Research Centre, Manesar, Haryana
- 2. Dr. Modhumita Ghosh, Scientist G, Institute of Forest Genetics and Tree Breeding, Coimbatore, Tamil Nadu
