

Course title: Power system engineering				
Course code: ENR 135		No. of credits: 3		L-T-P: 35-07-0
Learning hours: 42				
Pre-requisite course code and title (if any): No				
Department: Department of Energy and Environment				
Course coordinator: Dr. Naqui Anwer			Course instructor(s): Dr. Naqui Anwer	
contact details: naqui.anwer@terisas.ac.in				
Course type: Core			Course offered in : Semester 1	
Course description				
<p>It is very important to understand the characteristics, technologies and operation of conventional power system for generation, transmission and distribution of electrical energy. The programme is focused on renewable energy and therefore, it becomes more important to understand the functioning of conventional power system infrastructure first, so that the effects of increasing share of renewable energy can be understood. The course is designed to impart the knowledge of conventional power system equipments to the students. To work in a power industry, it is very important to understand the basic concepts of power systems and the related issues. Restructuring of power industry has increased the challenges even more. Hence, it is important for the renewable energy engineer to understand the basic concepts of power system operation, planning and analysis.</p>				
Course objectives				
<p>This course is designed to bring students of different disciplines to a certain level and to equip them with necessary knowledge of power systems. The objectives of the course are:</p> <ul style="list-style-type: none"> ▪ To impart knowledge about the methods of power generation, ▪ Understanding the transmission and distribution of electric power and related issues, ▪ Understanding the behaviour of power systems on variable load, and ▪ Determination of load flow analysis and economic load dispatch. 				
Course content				
Module	Topic	L	T	P
1	Methods of power generation	8	0	0
	Thermal power plants			
	Hydro-electric power plants			
	Nuclear power plant			
	Diesel power plant			
	Combined cycle power plant			
	Pumped storage plants			
Introduction to renewable energy sources				
2	Synchronous machines and transformer	9	2	0
	<i>Transformer:</i> construction, working, equivalent circuit, losses <i>Synchronous machines:</i> construction, principle of operation (generator/motor action), equivalent circuits, phasor diagram, operation of synchronous generator on infinite bus bar/grid, excitation control			
3	Transmission & distribution	8	2	0
	Classification of transmission lines – short, medium and long transmission line, transmission line parameters, modelling of lines and transmission line performance: Voltage regulation and efficiency; Loadability of lines, Basic concepts of HVDC			
4	Variable load on power stations	2	0	0
	Load and load duration curves, important terms and factors Important points in selecting generating units, interconnected grid system			
5	Power system analysis	8	3	0
	Load flow analysis: Gauss Seidel, Newton Raphson, Economic load Dispatch and unit commitment			
		35	7	0

<p>Evaluation criteria</p> <ul style="list-style-type: none"> ▪ Assignment: 10% ▪ Test 1: 20% ▪ Test 2: 20% ▪ Test 3: 50%
<p>Learning outcomes</p> <ul style="list-style-type: none"> ▪ Understanding the construction and operation of major conventional power plants. ▪ Understanding the features of transformer, synchronous machine, transmission line, distribution lines and HVDC system. ▪ Solving the problems related to transmission and distribution lines and their applications. ▪ Evaluating power systems for load flow analysis and economic load dispatch.
<p>Pedagogical approach A combination of class-room interactions, tutorials, assignments and projects.</p>
<p>Materials</p> <p>Recommended readings</p> <p>John J. Grainger and William D. Stevenson, "Power system analysis", Tata Mc Graw-Hill Publication, 2010 B.L.Theraja, A.K.Theraja, "A text book of Electrical Technology", S.Chand Publication, 2012 D.P.Kothari, I.J.Nagrath, "Modern Power system analysis", Tata Mc Graw-Hill Publication, 2016 Prabha Kundur, "Power system stability and control", Tata Mc Graw-Hill Publication, 1994 Daniel Krischen and Goran Strbac, "Fundamentals of Power System Economics", John Wiley & Sons Ltd., 2011 William H. Kersting, "Distribution System Modeling and Analysis", CRC Press, 2012</p>
<p>Additional information (if any): NA</p>
<p>Student responsibilities</p> <p>Attendance, feedback, discipline: as per university rules</p>

Reviewers

1. Dr. Sanjay Agrawal, Associate Professor, Department of Electrical Engineering, SOET, IGNOU, New Delhi
2. Dr. M. Rizwan, Assistant Professor, Department of Electrical Engineering, Delhi Technological University, New Delhi
